

BRAUN warehouse

Marktheidenfeld, 1998 - 1999
Industrial buildings

This new warehouse re-defines the unstructured spatial situation on the site. It re-organizes the streetscape at the intersection and provides a new face to the company's site. The warehouse is made of steel. Its facade alongside the road is made of translucent industrial pressed glass profiles, while the north facade is clad in anthracite-coloured sandwich panels made of trapezoidal sheet metal. Skylights allow natural daylight into the inside of the hall and create an ever-changing play of light on the glass facade. The hall is free of columns. Its precisely joined materials are a picture of simplicity and clarity, exemplifying the quality awareness of BRAUN GmbH in the fabric of the building.

BRAUN warehouse
