

## Fronius Research and Development Center - Interior Design

Thalheim, 2007 - 2011  
Research facilities

The building works for the Fronius Research and Development Center began in November 2008. The design reflects both the structure and corporate identity of the Austrian global player. Fronius core values are continuity and innovation. The relationship of the new buildings with the existing context reflects the belief that the past creates the present. The corporate colour on this building underlines its importance within the ensemble. The company's architectural language is expressed both by the building's exterior and interiors. The ensemble communicates the company's past, its recent transformation and visions for the future. Fronius message and mindset are reflected in the architecture: clarity and simplicity in the arrangement of the building volumes, open and flexible structures fostering good orientation, an energy efficient facade and the use of renewable energy - Protection of the environment and sustainability are paramount.

Conjointly with GTL, Kassel.

# Fronius Research and Development Center - Interior Design

Thalheim, 2007 - 2011  
Research facilities

Technical details:

Client: Fronius International GmbH

Typology: Research facilities

Gross floor area: 34,400 m<sup>2</sup>

Procurement documentation: Competition

Service phases (HOAI): 1-10
